

SIMS 202 PHONE PROJECT – ASSIGNMENT 4

Photo Metadata Design

September 25, 2003

0. DOCUMENT SUMMARY

- 1. INTRODUCTION**
- 2. PART 1 – METADATA DESIGN**
- 3. PART 2 – METADATA REVISION**
- 4. PART 3 – PHOTO ANNOTATION**

1. INTRODUCTION

Assignment 4 will consist of 3 distinct but related parts. Each part will be distributed separately and have different due dates. Parts 1 and 2 will be a group assignment and part 3 will be an individual assignment.

2. PART 1 – METADATA DESIGN

In the first part of the assignment, you will design your own faceted and monohierarchical metadata framework that is appropriate for your own application and maximizes reusability for the overall photo database.

After submission, the teaching team will review your metadata framework and give you feedback in a 30 minute meeting to be held outside of class hours.

3. PART 2 – METADATA REVISION

In the second part of the assignment, you will revise your metadata framework based on the feedback you receive from the teaching team. You will also create an information design to illustrate how your metadata framework would be presented to a user during the annotation process.

4. PART 3 – PHOTO ANNOTATION

In the third part of the assignment, you will take 5 photos related to your application scenario and annotate them using your new metadata framework loaded in the MMM application.
