The Scenario:
You are a tourist in San Francisco, and you are staying at a hostel for a week. You recently saw an ad for a mobile application that promises to show you events that are happening around you. This caught your interest, and you bookmarked it on your mobile phone.

How to interact with the phone:
To interact with the application, there are 17 different buttons you can use:
- The left and right "soft keys"
- The four directional buttons on the joystick
- The center button of the joystick
- The number keys from 0 to 9

There are four tasks in this test session. Your goal is to interact with the phone and try to accomplish your tasks. During the test session, try to think aloud as everything you think or wonder about can help us improve our design. Do not worry about making mistakes at this point.
