

INFO 290TA HW1:

Basic HTML, CSS, & jQuery

Deadline

Sept 23, 2013

Grading

5 points

Tasks

In this homework, you will practice basic HTML/CSS/jQuery skills by editing a simple to-do list. Your tasks are below:

1. Currently, the web page has a browser title (as indicated by the `<title>` tag). However, it doesn't have a main title on the page itself. Add a title using the appropriate HTML tag.
(.5 point)
2. The column widths are too narrow at the moment. In the css file (`_css/style.css`), make the columns wider without pushing the form below the list.
(.5 point)
3. Add various styles to create some hierarchy in the layout and make the to-do list easier to use. For example, you may consider making the input field bigger, adding a background color, making "remove" a button instead of a link, etc.
(1 point)
4. The user should be able to add/remove an item to/from the to-do list. Build these two functionalities using jQuery in the script file (`_js/script.js`). You may find the jQuery API documentation helpful (<http://api.jquery.com/>).
(3 points)
