(enhanced)

Digital Convergence: Mockup and Framework  
Group 3: Bernhard, Felix, Ryan, Philip

# The Research Tradepost

Center for Digital Technology and Management

A

- Constant ability/trigger to submit new research projects  
- provided in print and webpage

- CDTM/SIMS researcher posts new project topic, contacts, and link to discussion forum

- Newly announced project notified via SMS, mailing list, print

- Conceptual trigger  
- all new projects printed in magazine

- All new projects with short description, contacts and link to discussion forum in magazine

B

- link from AV triggers discussion and exchange of ideas

- CDTM/SIMS researcher posts new project

- Notification of most frequented discussion boards via SMS, mailing list, print

- Conceptual trigger  
- the editor's pick of the discussion groups is printed in the magazine

- All new projects  
- Most fruitful discussion in more detail

Community-Edited Blog Aggregator

- Main concept: **Take advantage of content already being generated in the SIMS and CDTM communities.**
- Many students do not have the time or inclination to read everyone's blogs, but they may be interested in seeing a few quality posts.
- Other students want to read (and rate) everything.
- The existing blogging infrastructure (syndication feeds and databases) makes it simple to create a system in which the latter can serve the former.

# Community-Edited Blog Aggregator

Center for Digital Technology and Management

Any SIMS or CDTM student with a blog can provide the URL of his or her RSS/Atom feed, using an HTML form.

As the blogger posts to his or her blog, the posts are syndicated to a central web site.

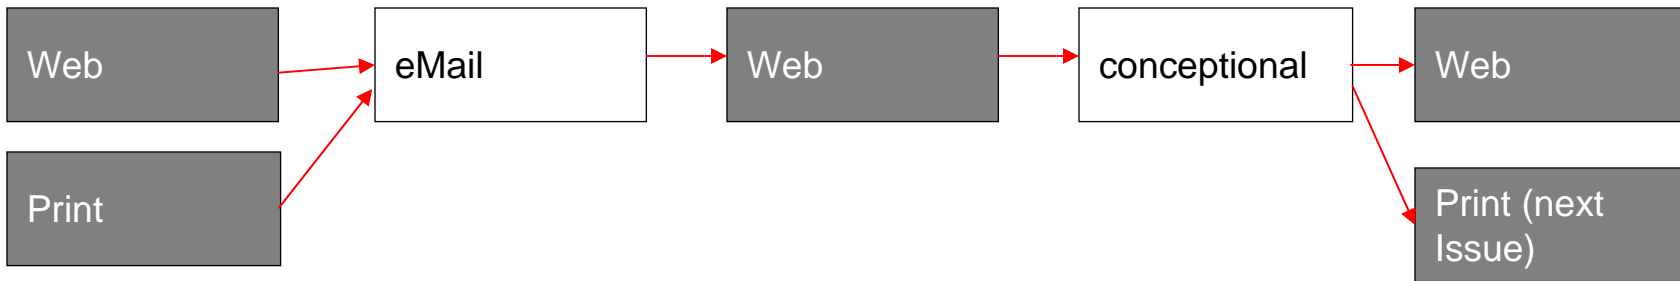

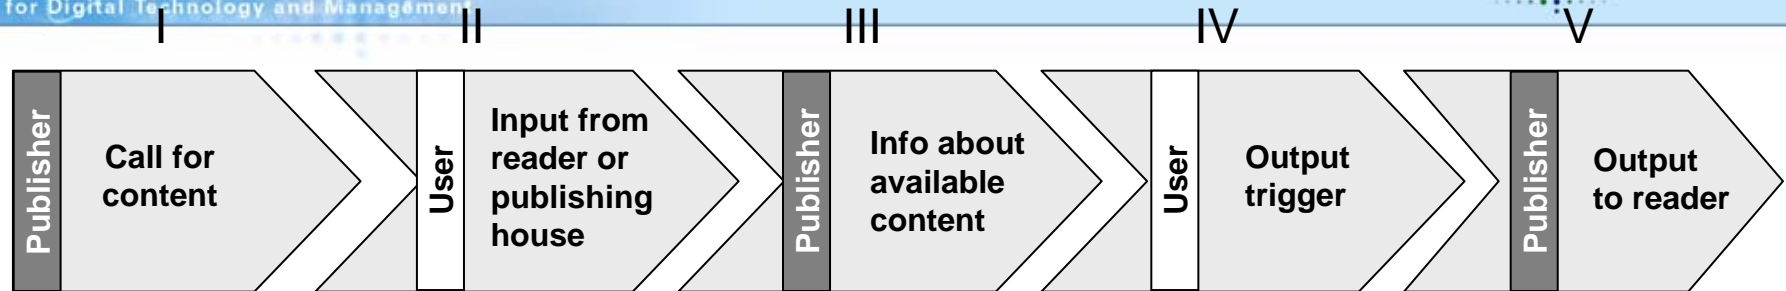

The posts appear on the site in order of the time they were posted, new posts at the top.

Readers can mark the posts they found amusing, informative, interesting, etc.

Posts and authors receiving the most positive votes are archived and published in the print newsletter.

# The Fun List

Center for Digital Technology and Management

Call for forwarding funny stuff on the FUN@berkeley.edu mailing list to a dedicated eMail address, that is published in Web and print issue.

SIMS students post funny stuff to the mailing list via eMail.

The current top entries are published on the Web.

The trigger is conceptual, since the funniest postings are automatically passed on to the publishing process.

Funniest postings get published on the Web and in the print magazine.
