

week 10

Synthesis

Mapping between the input and output space

Physical Computing

Physical Computing

Transducers

Output Transducers

Actuators (e.g., motors, piezo, etc.)

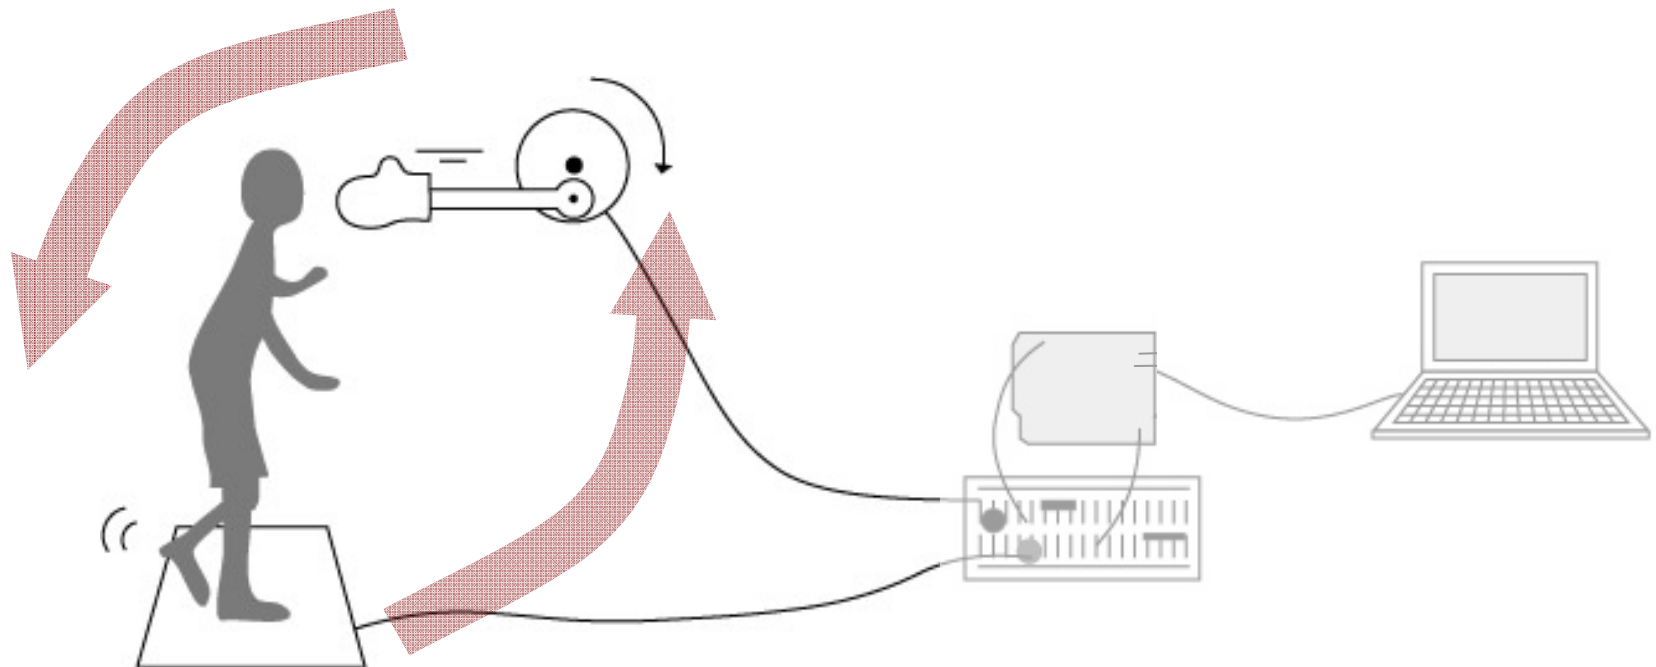

Input Transducers

Sensors (e.g., pot, FSR, photo sensor, etc.)

Designing Tangible UI

Designing meaningful interaction loop that takes advantage of your hands and body to manipulate digital information.

Responding? Thoughtless Acts

Come a Little Bit Closer Bench [droog, 2001]

Do Hit [van der Poll, 2001]

Input

What We Do
Press
Twist
Turn
Shake
Kick
Stretch
Squeeze
Pound
Scratch
.....

Output

What We Feel
Light
Sound
Motion
Vibration
Balance
Heat
Cold
Smell
.....

Input

Input Transducers

- FSR
- Potentiometer
- Switch
- Photo sensor
- Accelerometer
- Tilt sensor
- IR sensor

.....

In Class Exercise

In Class Exercise

Build an instrument that produces sound in response to physical manipulation.

Guideline

1. Work in teams of four.
2. The instrument should use at least **4 input devices**. The devices can be all the same, all different, or any combination in between.
3. Consider your instrument to be **collaborative** (or even competitive).
4. Think critically about the **mapping** between the input and output space.

Input Transducers

Output Transducers

Output 1

Piezo Speaker

```
byte names[] = {'c', 'd', 'e', 'f', 'g', 'a', 'b', 'C'};
int tones[] = {1915, 1700, 1519, 1432, 1275, 1136, 1014, 956};
byte melody[] = "2d2a1f2c2d2a2d2c2f2d2a2c2d2a1f2c2d2a2a2g2p8p8p";
// count length: 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6
//                                     10                                     20
```

Output 2

Sound Library

[Introduction](#)

[Download](#)

Examples

[MP3 Import](#)

[Signed Applets](#)

[Credits](#)

Classes

[Ess](#)

[AudioChannel](#)

[AudioStream](#)

[AudioInput](#)

[AudioFile](#)

[Subclasses of AudioFilter](#)

[Subclasses of AudioGenerator](#)

[FFT](#)

[Analysis \(uses MP3 import\)](#): Plays an MP3 while displaying an oscilloscope and performing real-time spectrum analysis. Click to start/stop

[Input FFT \(requires microphone\)](#): Showcase for new FFT processing options in Ess v2. Clicking and dragging changes FFT damping

[MP3 Stream \(uses MP3 streaming\)](#): Plays a stream from an Internet radio station in real-time

[Pan and Volume](#): Generates a looping sine wave and pink noise. Pan and volume are controlled by mouse position

[Ping Pong \(requires Internet connection\)](#): Loads a sound from the Web. Uses the audioOutputPan event to pan back and forth

[Pitch Shift](#): Plays generated sound in two AudioChannels, adjusting pitch over time. Left channel maintains tempo, right does not

[Reverb](#): Applies reverb 10 times to the first sentence of Alvin Lucier's seminal electroacoustic piece "I am Sitting in a Room"

[Scrub](#): Loads a sample that can be played/paused by clicking a button in the lower left-hand corner. Playback head can be adjusted by clicking and dragging

[Spooky Stream Save](#): Sound is generated in realtime, with pitch and pan controlled by the mouse. Streaming of generated sound to a file can be started/stopped by pressing any key

Output 3

Actuated Sound

STOMP

Mapping

Think critically about the mapping between the input and output space.

Homework

Post descriptions and photos (and/or video) of your instrument on the course website.

Let's get started!
